Fees	£9,250 per annum
Location	London

About this course

Employers from the healthcare sector have been directly involved in the design of this course. Collaborations with these sector partners are used to explore those skill sets that employers are most interested in and to constantly ensure they are embedded within the delivery of the course. You will also benefit from lecturers who have significant industry experience.

This course will provide you with a range of opportunities to develop the attitudes, abilities and competencies needed to work in a health and social care environment, both at home and internationally.

Today's health and social care organisations are exciting, complex, and varied. Therefore, successful practitioners need to be innovative and resilient. This course will offer you opportunities to use real-life case studies that draw on prioritisation, negotiation, and care planning skills.

You will graduate with a solid sectoral awareness and sound understanding of the interplay between health and social circumstances. This should enable you to take advantage of the many jobs skills that draw on these, and any entrepreneurial opportunities that the sector offers.

Our location in London, with world-class private and public healthcare, boasts more than 90 NHS hospitals and a host of private hospitals and social care organisations, offering you unrivalled opportunities in the sector.
